

std::false\_type

std::true\_type

detail::is\_json\_ref  
< json\_ref< T > >

```
graph BT; A[detail::is_json_ref< json_ref< T > >] --> B[std::false_type]; A --> C[std::true_type];
```

The diagram illustrates a C++ type hierarchy. At the bottom is a gray box representing the type `detail::is_json_ref< json_ref< T > >`. Two blue arrows point upwards from this box to two white boxes at the top. The left white box contains `std::false_type` and the right white box contains `std::true_type`. This indicates that `detail::is_json_ref< json_ref< T > >` inherits from both `std::false_type` and `std::true_type`.
