

`std::false_type`

`std::true_type`

`detail::is_complete
_type< T, decltype(void
(sizeof(T)))>`

```
graph BT; A["detail::is_complete_type< T, decltype(void (sizeof(T)))>"] --> B["std::false_type"]; A --> C["std::true_type"];
```

The diagram illustrates the relationship between the `std::false_type` and `std::true_type` types and the `detail::is_complete_type` template. Two blue arrows point from the bottom box to the top boxes, indicating that the template specializes into these two types.
